Summary

Results-driven IT Project Manager, Product Owner, Technical Program Manager, and former USAF Intelligence Analyst who often serves in a dual role bridging the gap between engineering teams and business stakeholders. Translates technical requirements into plain language to build clear roadmaps and designs user-friendly tools, such as self-service security portals. Coordinates cross-team efforts to deliver reliable software features by finding simple solutions to problems and keeping projects on schedule. Focuses on defining the right strategies and guiding projects from the initial idea to the final release to ensure successful outcomes.
